

THANK YOU
*to all our exhibitors for
sponsoring this SAT conference!*

Please show your thanks by visiting with them and utilizing their products and services.

Agilent Technologies

Agilent is a leading provider of life sciences and analytical instrument systems to scientists in life sciences, pharmaceutical, environmental and chemical industries, worldwide. The company offers scientists the range of instruments, systems and services needed for success in acquiring and interpreting genetic and chemical information - from sample handling, to analysis to data management and reporting.

www.agilent.com

The Applied Biosystems Group serves the life science industry and research community by developing and marketing instrument-based systems, consumables, software, and services. Applied Biosystems has demonstrated its position as a technology leader and driving force in the changing dynamics of the life science marketplace.

Cerilliant Corporation offers reference standards for Forensic Science applications, including standards for drugs of abuse, alcohol analysis (ethanol standards are traceable to NIST standards), phytochemicals, explosives, fire debris, environmental toxins and trace metals. Drug standards include commonly abused drugs, unusual drugs, stable isotope, and hard to find metabolites. Also available are custom standards preparation, synthesis, packaging and analytical services.

Immunoanalysis means innovation! Immunoanalysis offers ELISA's, EIA's, and RIA's for more than 30 different drugs and drug metabolites. The ELISA's are designed to work with a wide array of matrices, including blood, urine, tissue, meconium, oral fluid and hair. Immunoanalysis also provides ELISA processing equipment and GC/MS training.

Parker Balston Gas Generators are designed to eliminate high purity gas cylinders from the laboratory. There is no longer any need to buy and store excessive reserves, and use up laboratory floor space as protection from late deliveries, transportation interruptions, or periods of tight supplies. These state-of-the-art gas generators produce a continuous supply of ultra-high purity gases for GCs, FT-IRs, TOC, ICP, AA, and LC/MS analytical instruments. All products are backed by a fully staffed field sales and service organization and a one-year warranty.

Trust PerkinElmer for Integrated Solutions.

Today's forensic laboratory is a high-paced environment striving to provide high quality results that withstand evidentiary challenge and match the throughput needs of the case. As the first company to introduce commercial Infrared analytical technology, PerkinElmer has been providing accurate and productive instrumentation to forensic laboratories for more than 60 years.

Productive analytical technology is a critical requirement in this growing area of analysis. Techniques such as GC/MS and ICP-MS can help to minimize backlogs while providing high quality information.

Randox is a privately owned diagnostic reagent and equipment manufacturer. Since its inception in 1982, Randox have developed some of the most exciting and revolutionary technology in the field of medical diagnostics.

. Our core products and services are Biochip Array Technology, clinical chemistry automation systems, external quality assurance schemes, Internet driven QA systems, quality control materials, antibodies, recombinant proteins, clinical reagents and environmental diagnostics.

SHIMADZU

Shimadzu Corporation has consistently accepted the challenge to develop pioneering technologies to ensure that customers in all fields have ready access to a variety of high-technology products. We are constantly taking the initiative in the world of analytical technology through the development of a sophisticated group of products including chromatographs, atomic absorption spectrophotometers, and composition and surface analyzers. Precise mass weighing is essential in research and industry. Shimadzu began production of balances in 1918. Our commitment never ends. Shimadzu will continue to advance weighing technology in the 21st century.

Thermo is the world leader in analytical instruments. Our instrument solutions enable our customers to make the world a healthier, cleaner and safer place. You may know us by many different names, but today, we go by Thermo Electron Corporation for laboratory, analytical, measurement and control instruments and software. One company, one name, one focus: Your success.

www.thermo.com

For the past 20 years, UCT has been developing and manufacturing two major silicon-based product lines. Our solid phase extraction products and line of specialty chemicals (Petrarch®) are distributed nationally as well as worldwide, with great success. We are committed to supplying our customers with top-quality, dependable products, as well as unsurpassed technical support.

Waters

Forensic toxicologists worldwide now recognize the outstanding selectivity, sensitivity and robustness of LC/MS/MS technology for drugs of abuse analysis. Waters MassTrak™ systems enable confirmation analysis with the highest degree of confidence and offer a powerful tool for screening applications. If you are involved with forensic toxicology, Waters MassTrak™ systems:

- enable small sample volumes to be used due to the high sensitivity of LC/MS/MS
- allow accurate measurement in alternative sample matrices such as saliva, sweat, and hair
- greatly increase sample throughput due to minimal sample preparation and fast chromatography
